

TravelDoo Mobile

Travel & Expense mobile solutions for global travel.

TravelDoo's innovative, traveller-centric mobile technology takes the hassle out of business travel. And because TravelDoo uses the latest technology, you can be sure our products will always be leading the way, evolving fast to anticipate the needs of global travellers.

We offer two applications – Travel and Expense – linked by the latest technology and fully synchronised with your Web solution.

Wherever they are in the world, your business travellers can view trip bookings, access on-the-go travel information and record their expenses electronically, all through their Android or iOS phone. The apps also have counterpart functionality available to Apple Watch users for the ultimate in easy-to-use technology.

Your virtual travel assistant

TravelDoo's Travel app offers many of the great features of the Web solution in mobile format. Travellers can securely access information on all their business trips. Each segment of the trip – including its duration – is clearly shown, allowing users to get the relevant information for each segment of their trip as it arrives. The app is also integrated with Uber, allowing travellers to book an Uber car to the next point on their itinerary with a single action.

The Travel app gives travellers the ability to locate hotels, car rental firms, rail stations and airports as needed.

Booking on the go offers the same rich resource as the web-based version: the same wide range of suppliers, the same fares and the same sleek, automated approval process of the Web-based version. And if the approver is on-the-go themselves, no problem! Everything can be done from their mobile.

With in-app emailing, travellers can share their itinerary with colleagues, family and friends. Wherever they are in the world, TravelDoo's Travel app keeps travellers connected.

On-the-Go Expense Capture and Approval

With Traveldoo's Expense app, recording expenses on-the-go couldn't be simpler. The Expense app synchronises with the Travel app, meaning a business trip can turn into an expense claim with the minimum of fuss or effort.

It's quick and easy to add expenses – geolocation helps to reconcile the scanned receipt with the correct expense, and with voice control, there's hardly any need to key in data.

Traveldoo's solution is "end-to-end", so corporate card information is automatically imported and reconciled with the relevant trip bookings, so expense claims can be almost entirely automated and reimbursement times are kept to a minimum, which is key to great user satisfaction.

As the mobile version of Expense is fully synchronised with the web solution, all the same policy rules and controls apply.

Ease of use for your travellers means they keep using the systems you provide, giving you greater visibility and control of T&E spend.
